

PRACTICAL RESPONSES TO A **CHANGING WORLD**

CLIMATE ADAPTATION STRATEGIES FOR ALASKA

**Adapt Alaska | Adapt Y-K Delta
Sustainable Southeast Partnership**

Climate change is affecting communities across Alaska. Climate change impacts fish and wildlife habitats and access to wild foods that support a subsistence way of life. A changing climate leads to thawing permafrost and erosion and inundation on coasts and rivers, impacting critical infrastructure such as roads, trails, water systems and buildings. These changes are likely to continue and intensify, offering challenges as well as opportunities. We invite you to share your ideas and success stories as we explore practical and innovative solutions to climate impacts in Alaska's communities and regions, collaborative approaches to complex issues, and priorities for action.
